

Machine Learning in Crowd Modeling & Simulation

Lecture 2 - simulation software

Felix Dietrich

This video: short introduction to crowd simulation software

TUM Uhrenturm

Simulation software

Crowd simulation for interdisciplinary work

From [Kleinmeier et al., 2019]: [Crowd] behaviors that were observed and described by empirical scientists are operationalized, then mapped to equations, algorithms, and finally computer programs. These computer programs can be executed to reenact real scenarios in a virtual world, where they can be re-observed. Therefore, [crowd simulation software is] a powerful tool to foster interdisciplinary understanding in [crowd] dynamics.

Simulation software

Crowd simulation for interdisciplinary work

From [Kleinmeier et al., 2019]: [Crowd] behaviors that were observed and described by empirical scientists are operationalized, then mapped to equations, algorithms, and finally computer programs. These computer programs can be executed to reenact real scenarios in a virtual world, where they can be re-observed. Therefore, [crowd simulation software is] a powerful tool to foster interdisciplinary understanding in [crowd] dynamics.

Current crowd simulation software solutions

(list from [Kleinmeier et al., 2019])

Commercial:

- PTV
- LEGION
- accu:rate

Open source:

- FDS+Evac
- JuPed-Sim
- Menge
- MomenTUMv2
- SUMO
- Vadere (next sections in this video)

Simulation software

Introduction to Vadere

Research simulation framework of
Pedestrian Dynamics research group
Head: Prof. Dr. Gerta Köster at Munich
University of Applied Sciences
Website: www.vadere.org

Released in 2010 by Dr. Dietrich, Dr. Seitz, Dr. von Sivers, and B. Zönnchen:

Active development team:

Simulation software

Introduction to Vadere - overview

Core features:

1. Cross-platform (Java based)
2. Easy-to-use GUI with ScenarioChecker
3. Command-line-interface for automation
4. JSON-based input files
5. Shipped with different locomotion models
6. Evaluation methods for simulation outputs
7. Continuous integration / deployment pipeline

Details:

Simulation software

Summary

Vadere is a powerful tool for crowd simulation.
It is open source with an active development team.
Try it out at www.vadere.org!
